

The Challenges of Transdisciplinary Education and Research: What Can Japanese Universities Learn from the European Experience?

学際的な教育研究の課題と解決策 – 欧州の経験から日本の大学が何を学べるのか –

The 12th International Symposium on Human Survivability continues the discussion about transdisciplinary education and research that we started at last year's international symposium. At the 12th International Symposium on Human Survivability, we will discuss the lessons that can be learnt by Japanese universities from the practice of transdisciplinary education and research overseas. In particular, we will look into some examples of how transdisciplinary approaches have been applied in practice, and try to understand the reasons for their successes or failures. All GSAIS students and faculty members are required to participate actively in the 12th International Symposium.

Date & Time: **November 6, 2023 (Mon.) 13:00 – 19:50 (JST)**

Venue: **Kyoto University Higashi Ichijo Building and online (Zoom)**

Registration: <https://forms.gle/RjrdbUuRmCveza2d9>

Program:

I . Student Event

Presentations on the Transdisciplinary Research Concept Figures
(presentations by GSAIS students)

13:00-15:00

II . Social gathering (incl. student poster presentations)

※ Restricted to Kyoto University professors and students

16:30

15:00-

III . Main Program

Presentations by four invited speakers from Japan and overseas
Presentation by a GSAIS professor
Panel Discussion

17:00-19:50

For details about the main program, please refer to the international symposium web site:
